Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Milton is a diligent clerk at a school who has been assigned the task of managing class schedules. The school has various sections, and Milton needs to keep track of the class schedules for each section using a stack-based system.

He uses a program that allows him to push, pop, and display class schedules for each section. Milton's program uses a stack data structure, and each class schedule is represented as a character. Help him write a program using a linked list.

Input Format

The input consists of integers corresponding to the operation that needs to be performed:

Choice 1: Push the character onto the stack. If the choice is 1, the following input is a space-separated character, representing the class schedule to be pushed onto the stack.

Choice 2: Pop class schedule from the stack

Choice 3: Display the class schedules in the stack.

Choice 4: Exit the program.

Output Format

The output displays messages according to the choice and the status of the stack:

- If the choice is 1, push the given class schedule to the stack and display the following: "Adding Section: [class schedule]"
- If the choice is 2, pop the class schedule from the stack and display the following: "Removing Section: [class schedule]"
- If the choice is 2, and if the stack is empty without any class schedules, print "Stack is empty. Cannot pop."
- If the choice is 3, print the class schedules in the stack in the following:
- "Enrolled Sections: " followed by the class schedules separated by space.
- If the choice is 3, and there are no class schedules in the stack, print "Stack is empty"
- If the choice is 4, exit the program and display the following: "Exiting the program"
 - If any other choice is entered, print "Invalid choice"

Refer to the sample output for the exact format.

Sample Test Case

Input: 1 d

3

2

```
24,180,124,1
Output: Adding Section: d
Adding Section: h
Enrolled 6
     Removing Section: h
     Enrolled Sections: d
     Exiting program
     Answer
     #include <stdio.h>
     #include <stdlib.h>
                                                                                 241801241
     struct Node {
    char data;
       struct Node* next;
     struct Node* top = NULL;
     void push(char value) {
       struct Node* newNode = (struct Node*)malloc(sizeof(struct Node));
       if (!newNode) {
         printf("Memory allocation failed!\n");
         return;
       newNode->data = value;
       newNode->next = top;
       top = newNode;
       printf("Adding Section: %c\n", value);
     }
     void pop() {
       if (top == NULL) {
         printf("Stack is empty. Cannot pop.\n");
       } else {
         struct Node* temp = top;
         top = top->next;
free(temp);
         printf("Removing Section: %c\n", temp->data);
```

```
241801241
void displayStack() {
   if (top == NULL) {
     printf("Stack is empty\n");
   } else {
     struct Node* temp = top;
     printf("Enrolled Sections: ");
     while (temp != NULL) {
       printf("%c ", temp->data);
       temp = temp->next;
     printf("\n");
int main() {
   int choice;
   char value;
   do {
     scanf("%d", &choice);
     switch (choice) {
       case 1:
          scanf(" %c", &value);
          push(value);
          break;
       case 2:
                                                   24,180,124,1
          pop();
          break;
       case 3:
          displayStack();
          break;
       case 4:
          printf("Exiting program\n");
          break;
       default:
          printf("Invalid choice\n");
   } while (choice != 4);
                                                   241801241
                       241801241
   return 0;
```
